

AquaProTi

**ICT « digitalisation » for efficient resource management
in waterworks
(preparatory phase)**

Bruno Storni

Swiss US Innovative Energy Days New York 24.08.2017

High energy intensity in water

Pumping , consumer hot water use

Sewage treatment

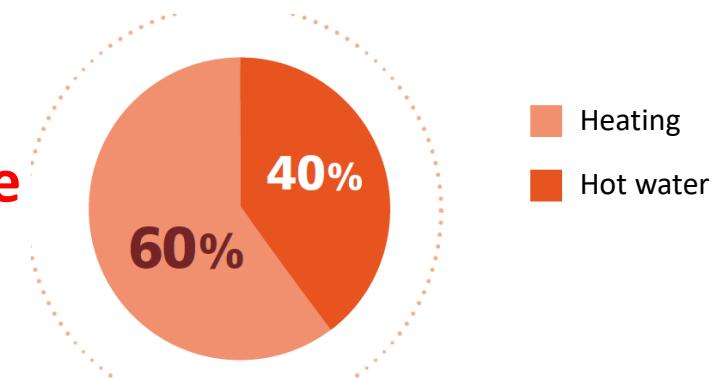

Embedded energy in Water

State of the waterworks : **buried old pipes networks**

Non Revenue Water (leaks, counter errors, self use, etc.)

In Switzerland declared NRW 20% (leaks estimated 13%)

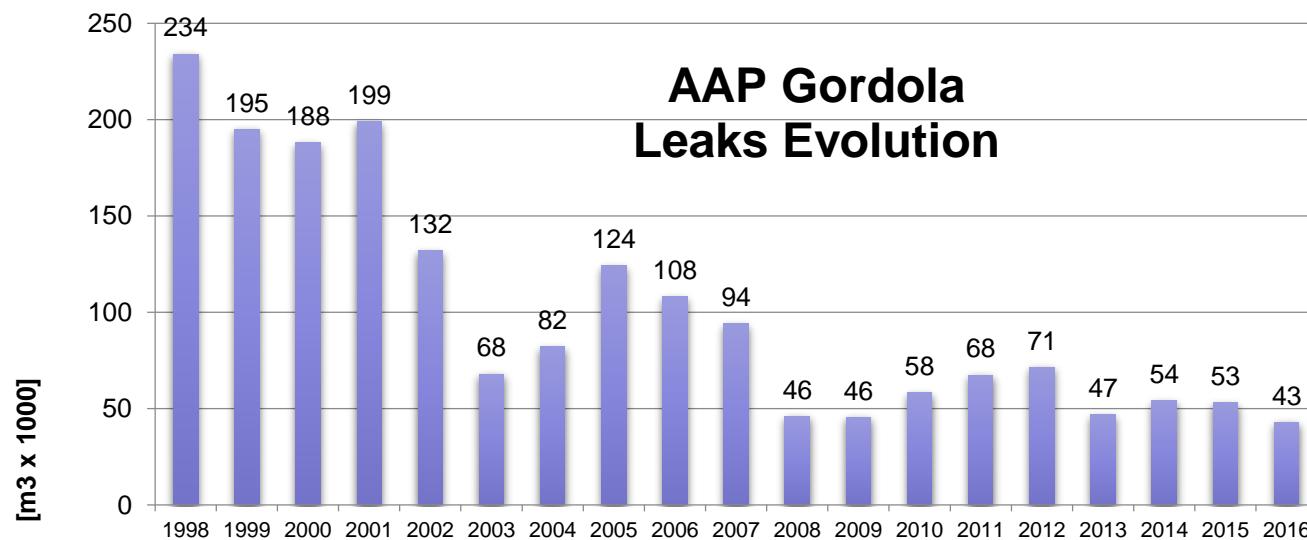

Tariffs : no or low causality for consumer, wasting water

Heating
Hot water

Baseline Gordola Project: >15 years of stepwise improvements

Next step adopt more ICT

Smartmeters

More accurate

On line communication (wireless technologies)

On line leaks monitorings

Dynamic Tarifs (causality) Peak and band consumption reduction

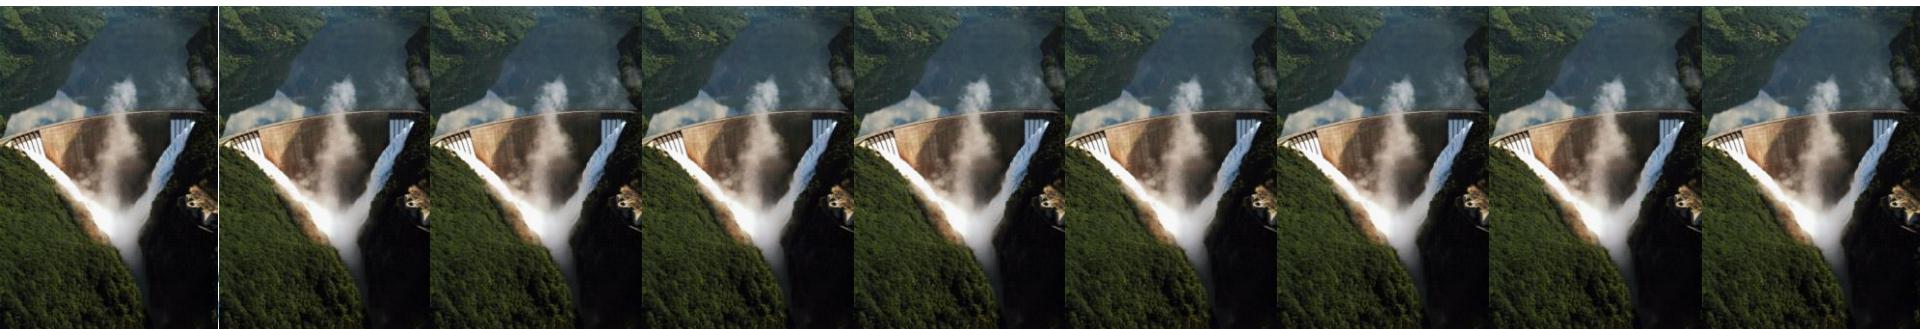

Internet of things on line data analytics

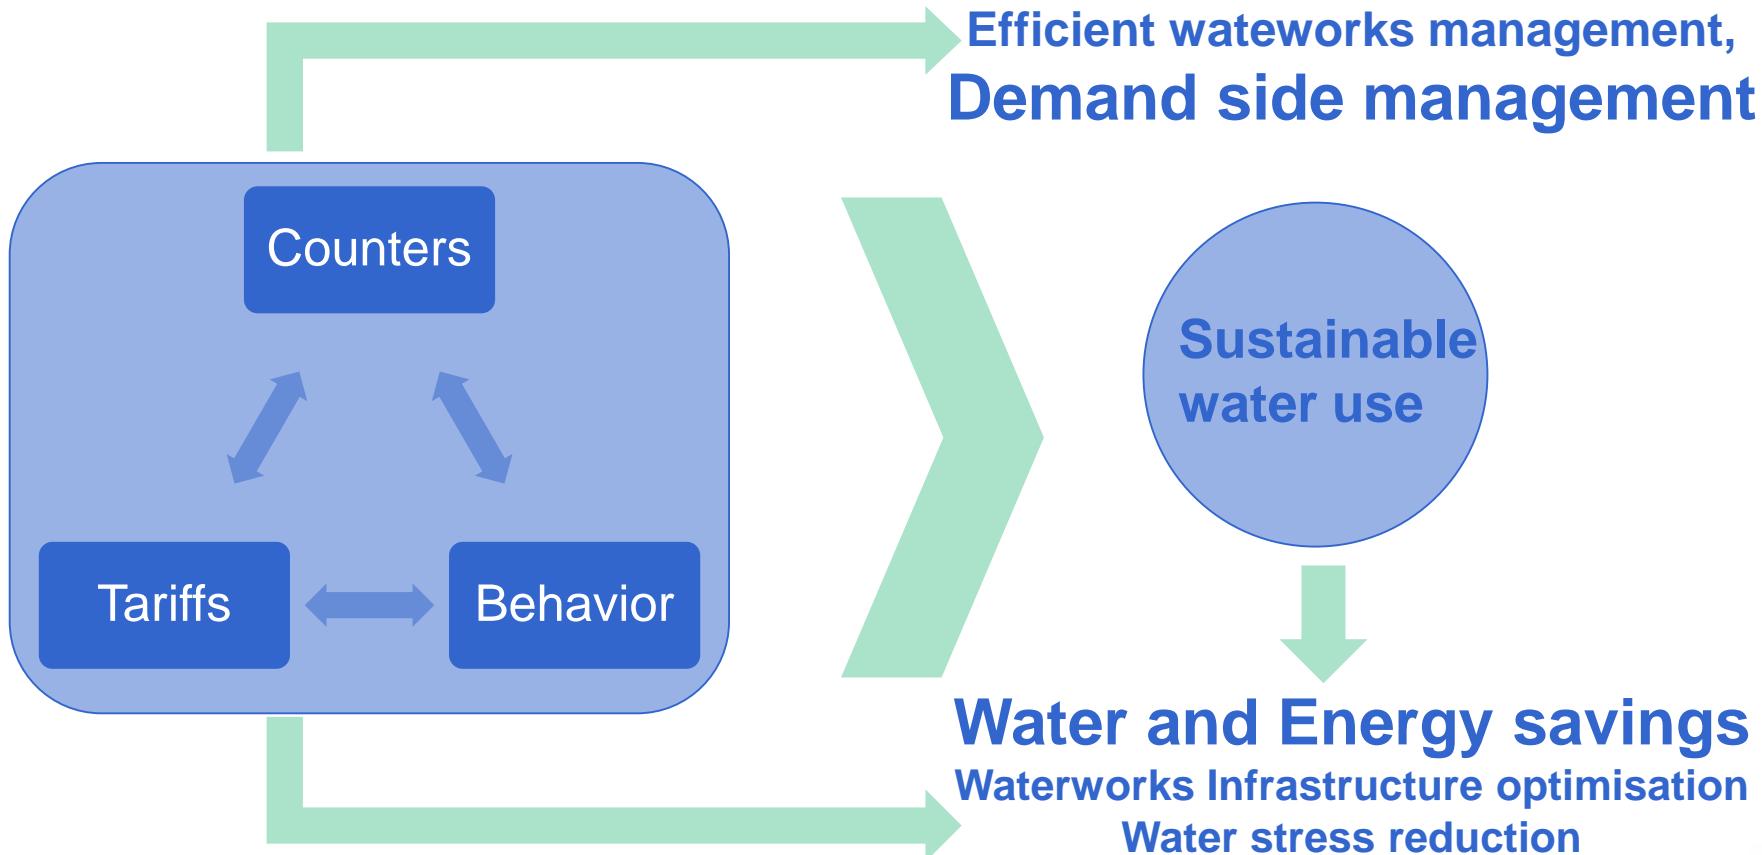

Energy saving potential in Switzerland

1. Halving Leaks (NRW) hunderts GWh
 2. Reducing hot water use TWh
 3. Reducing sewage treatment hunderts GWh

total 1.5-2.5 TWh/y (7 – 11 Verzasca power plants)

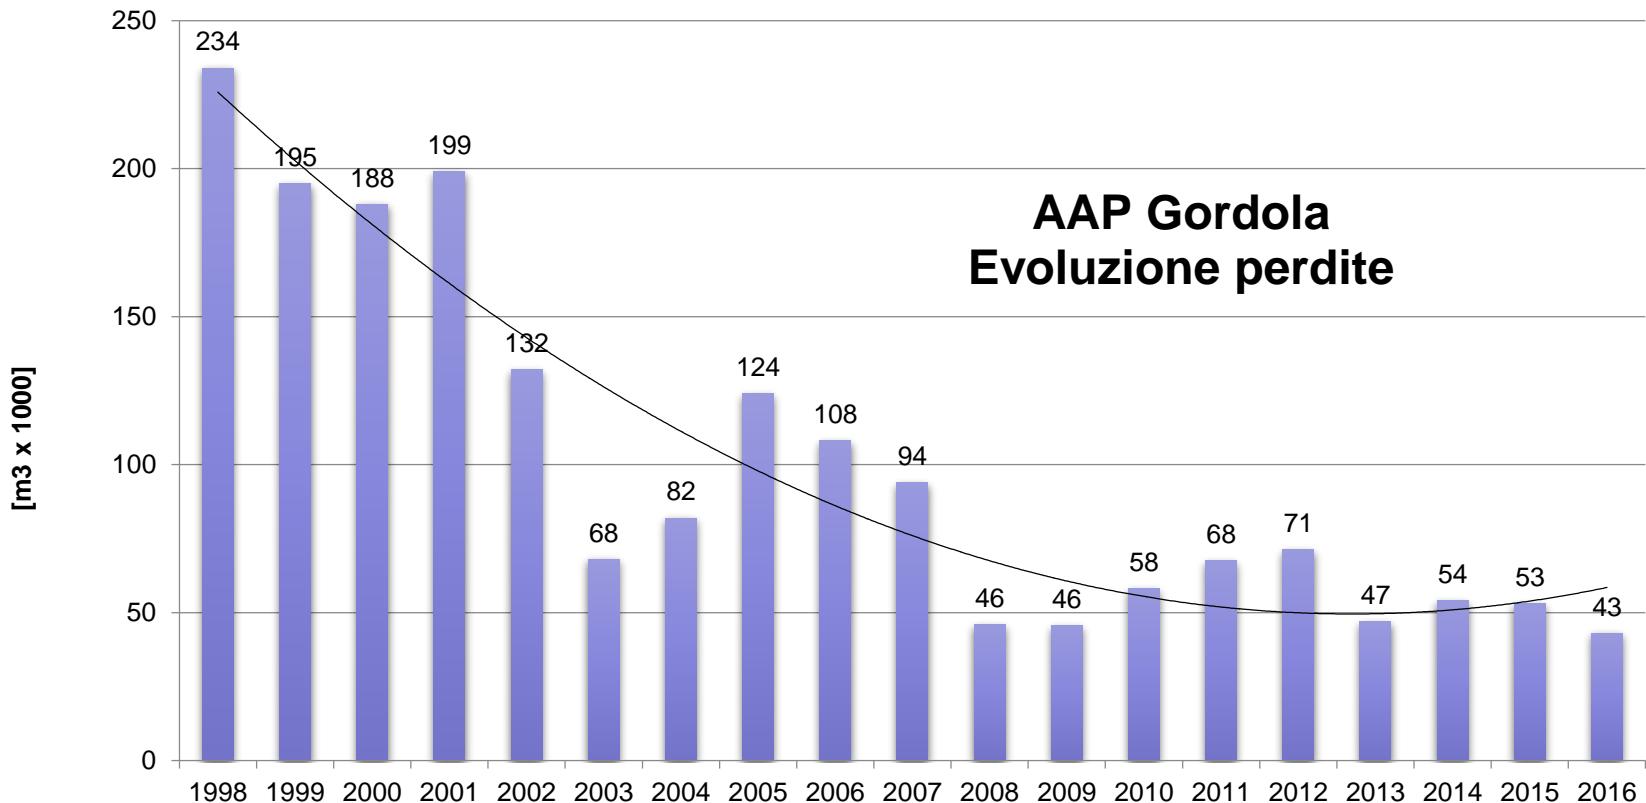

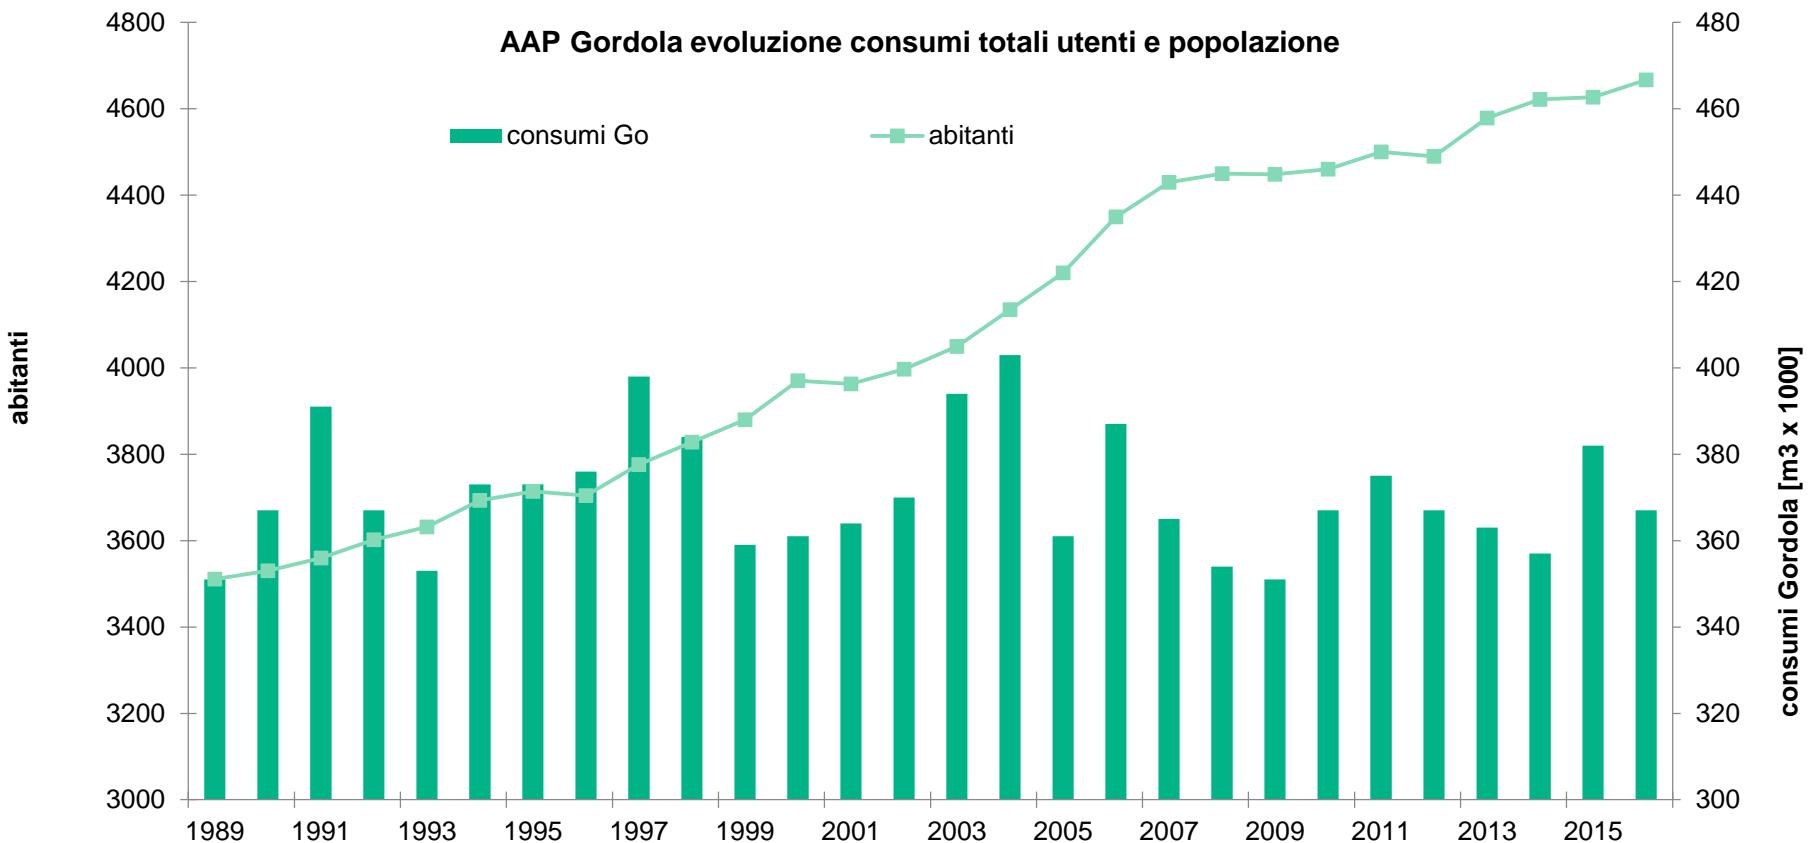

When the well's dry, we know the worth of water

Benjamin Franklin (1706-1790)
